

# Indexes to the *Technical Quarterly* Volume 42 (2005)

—Compiled by James J. Hackbarth, The Gambrinus Company

## Author Index

- |                            |                             |                             |                          |
|----------------------------|-----------------------------|-----------------------------|--------------------------|
| Agius, G., 54, 117         | Fischer, S., 21             | Kondo, H., 107              | Quilliam, W., 209        |
| Agu, R. C., 120, 199, 315  | Fletcher, S., 209           | Krottenthaler, M., 219      |                          |
| Alegado, N. V., 16         | Foster, R. T., II, 209      |                             | Rehmanji, M., 332        |
| Ames, J. M., 204           |                             | Langrell, D. E., 101        | Russ, W., 21, 290        |
| Antoni, D., 290            | Gaub, R., 65                | Lanthier, P., 297           |                          |
| Arendt, E. K., 184         | Giarratano, C. E., 209      | Larsen, O. V., 339          | Samp, E. J., 209         |
| Atsumi, R., 283            | González del Cueto, A., 125 | Lekkas, C., 113             | Savel, J., 57            |
|                            | Goode, D. L., 184           | Lewis, M. J., 45            | Schneeberger, M., 219    |
| Back, W., 219              | Gopal, C., 332              | Lynn, P. Y., 7              | Schneider, J., 346       |
| Bamforth, C. W., 178       | Grönewald, C., 214          |                             | Señires, A. Z., 16       |
| Benet, S., 25              | Groot Kormelinck, V., 309   | Mattos, R., 13              | Siebert, K. J., 7        |
| Böe, K., 133               |                             | Meyer-Pittroff, R., 21, 290 | Simpson, B., 339         |
| Brantley, J. D., 342       | Hatfield, G. R., 7          | Miedaner, H., 329           | Slate, W. R., 25         |
| Buehler, T., 319           | Hill, A., 113               | Miller, M., 209             | Snyder, J., 65           |
| Buggey, L. A., 204         | Hiraga, T., 283             | Mitani, Y., 283             | Stewart, G. G., 113, 305 |
| Burkeen, S., 54            | Hodgson, J., 113            | Mola, A., 332               |                          |
|                            | Hung, J. K. S., 178         | Moretti, R. H., 13          | Taidi, B., 113           |
| Chevalier, F., 214         |                             | Mörtel, H., 290             | Takamoto, Y., 283        |
| Clark, D. F., Jr., 7       | Ingledeew, W. M., 173       | Muller, R. E., 49           | Tobia, A., 117           |
| Cubertorer, D. A., 49      | Inns, E. L., 204            |                             |                          |
|                            | Ishida, H., 273             | Nielsen, O., 128            | Wallin, C. E., 178       |
| de la Mora Miquel, E., 125 |                             | Nishio, N., 283             | Wasmuht, K., 329         |
| Dirksen, J., 39            | Jørgensen, C. W., 339       | Nunes, C., 297              | Weber, I., 346           |
| Duffell, C. J., 31         |                             | Nursten, H. E., 204         | Weinzierl, M., 329       |
|                            | Kanagachandran, K., 324     |                             | Wijngaard, H. H., 184    |
| Edney, M. J., 101          | Kawasaki, Y., 107           | Orzinski, M., 346           | Williams, I., 339        |
| Evers, G., 319             | Kiehne, M., 214             |                             | Worzinski, G., 133       |

## Subject Index

- |                                      |                                       |                                             |
|--------------------------------------|---------------------------------------|---------------------------------------------|
| Adjunct, 184                         | Beta-glucan gel, 21                   | Contamination                               |
| Aeration, 128                        | Biogas, 283, 324                      | of filling areas, 39                        |
| Aerobic treatment, 309               | Biohydrogen, 283                      | and flavor, 31                              |
| Aging, 57                            | Biomass, 283                          | Control point, 16                           |
| Alcohol cooling test, 7              | BIOPAQ® IC, 309                       | Conveyor sanitation, 39                     |
| Amino acids, 101, 113                | Bottle washers, 117                   | Cristobalite, 290                           |
| Ammonia, 113                         | Brewery effluent, 309                 | Critical control point, 16                  |
| Amylolytic enzymes, 120, 315         | Business case, 297                    | Crossflow filtration, 342                   |
| Anaerobic treatment, 309             |                                       | Crossflow membrane, 65                      |
| Ancient Egypt, 273                   | Carbon dioxide, 31                    | Current Good Manufacturing Practices,<br>16 |
| Antioxidant, 57                      | Caustic, 117                          |                                             |
| Antioxidant activity, 204            | Celiac disease, 45                    | Deposits, 117                               |
| Aroma extract dilution analysis, 219 | Cereals, 305                          | Detection, of bacteria, 214                 |
| Asset reliability, 297               | Chemical oxygen demand (COD), 324     | Dewatering, 173                             |
|                                      | Closure, of bottles, 346              | Diastatic power, 199                        |
| Bacteria, 214                        | Cold sanitation, 54                   | Diatomaceous earth, 65, 290                 |
| Barley, 49, 184, 315                 | Colloidal stability, 332              | Differential spectroscopy, 57               |
| Barley malt, 101                     | Commercial enzymes, 184, 199          | Direct flow, 342                            |
| Beer-spoilage bacteria, 214          | Common pathway reconstruction,<br>273 | Distillation, 173, 305                      |
| Beta-glucan, 120                     |                                       |                                             |

- Drinkability, 13  
 Drying, 173  
 ECO-MATRIX, 133  
 Ecoship management, 107  
 Efficiency, of brewhouse, 319  
 Effluent of brewery, 309  
 Electron paramagnetic resonance (EPR), 209  
 Environment, 107  
 Environmental protection, 319  
 Enzymes, 120, 184, 199, 315  
 Ethanol, 173  
 Extract, 120, 315  
 Fermentability, of malt, 101  
 Fermentable sugars, 101  
 Fermentation, 173, 283  
 Fermentation performance, 113  
 Filler sanitation, 54  
 Filterability, 21  
 Filtration, 290, 329, 342  
 Filtration system, 65  
 Flavor, 31  
 Flavor stability, 209  
 Flavor training, 339  
 Flexibility criteria, for brewhouse, 319  
 Flexible intermediate bulk containers (FIBC), 25  
 Flocculent, 117  
 Fluid dynamics, 342  
 Foam, 178  
 Foam stability, 219  
 Food quality, 16  
 Food safety, 16  
 Forcing test, 7  
 Free amino nitrogen, 113  
 Free radicals, 57  
 Freeze-drying, 125  
 Friability, 199  
 Fuel, 173  
 Germ plasm, 125  
 Germination capacity, 125  
 Germination energy, 125  
 Gluten, 45  
 Gluten-free, 45  
 HACCP, 16, 31  
 Haze, 332  
 Haze-active protein test, 7  
 High-pressure treatment, of beta-glucan gel, 21  
 High-speed centrifuge, 65  
 Hydrogen fermentation, 283  
 Identification, of bacteria, 214  
 Instrumental, 178  
 International Society of Beverage Technologists (ISBT), 31  
 Japan, 107  
 Kaemref, 273  
 Kenamun, 273  
 Khnumhotep, 273  
 Kieselguhr, 290  
 Kilning, 204  
 Lagtime, of EPR, 209  
 Laser method, of monitoring, 49  
 Lauter tun, 329  
 Maintenance, reliability driven, 297  
 Malt, 49, 204  
 Malting, 120, 315  
 Malting barley, 125  
 Mash filtration, 329  
 Mash production, 173  
 Mashing, 184, 199  
 Material handling, 25  
 Matrix piping, 133  
 Maturation, of whiskey, 305  
 Measurement, of foam stability, 178  
 Meketre, 273  
 Membrane, morphology of , 342  
   Crossflow membrane, 65  
 Methane fermentation, 283  
 Method, to monitor water distribution, 49  
 Microorganisms, and contamination, 39  
 Musty odors, 39  
 New brewhouse, 319  
 Odors, musty, 39  
 Oxygen, 128  
 Oxygen barrier, 346  
 Particle size, 7  
 Pegasus, 329  
 Perception, of foam, 178  
 Permeation, of bottles, 346  
 PET bottle, 346  
 Phenolic acids, 204  
 Piping system, 133  
 Plastic beer bottles, 346  
 Polymerase chain reaction, 214  
 Polymeric chemistry, 21  
 Polyphenols, 332  
 Polyvinylpyrrolidone (PVPP), 332  
 Product quality, 319  
 Prolamin, 45  
 Proline, 45  
 Prooxidant, 57  
 Propagation, of yeast, 128  
 Proteins, 120, 315, 332  
 Quality, of carbon dioxide, 31  
 Quick test, of oxygen permeation, 346  
 Rapid testing, 214  
 Reliability of assets, 297  
 Sanitation of conveyor, 39  
 Sanitation of filler, 54  
 Saturated ammonium sulfate precipitation limit (SASPL) test, 7  
 Settling, during bottle washing, 117  
 Silica type, 7  
 Silos, 25  
 Sorghum, 120  
 Specificity, 214  
 Spent grains, 173, 324  
 Steam-in-place, 54  
 Storage, 125  
 Stress, 128  
 Sugars, 120, 315  
 Sulfur dioxide, 209  
 Supernatant, 324  
 Surplus yeast, 219  
 Sustainability management, 107  
 T150, 209  
 Tank farms, 133  
 Taste panel training, 339  
 Technology, 173  
 TILT-TANK, 25  
 Tomb beer painting, 273  
 Total nitrogen, 199  
 Transportable storage, 25  
 Two-stage fermentation, 283  
 Validation of training, 339  
 Vicinal diketones (VDK), 113  
 Wastewater, 309, 324  
 Water distribution, 49  
 Wheat, 45  
 Whiskey, 305  
 Whole corns, 199  
 Wort production, 329  
 Wort quality, 184  
 Wort supplementation, 113  
 Yeast, 128, 305  
 Yeast beer, 219  
 Yeast vitality, 219  
 Yield, 128
